

## 'The Ideal Website'

The Ideal Website was founded in 1995.

We are now a well established internet design company, we have experience with a whole range of various types of websites, from e-commerce enabled shop front websites, portal websites, dating agencies, job advertising agencies, and of course simple budget websites for home users and entrepreneur's starting up a new business.

We take on work for small and large projects and give realistic time scales.

Our work portfolio includes Intranet work, secure extranet work, Programming and script writing, Graphic Design and consultations on e-commerce and web security. We are also experts on advice and design for the top search engines currently available.

We are very reasonable on price and deliver fixed costs per project, not per hour or day. We find that having a clear view of the work involved and creating a quote and timescale that we stick to from the start gives our customers the assurance and clear view of the costs involved right from the beginning of a project. This method has worked time and time again to ensure customers continue to return to us for further web development needs.

We have been involved in many website projects that range from Flash presentations and Marketing Initiatives/Brochures, custom programming and database interaction, graphic design and Marketing websites to full website development from initial consultations to the end product. We specialise in creating custom content management systems for Intranets and Internets that allow non-programmers the ability to make changes to their websites themselves in a straightforward, easy to use way. These systems are very popular with companies that have content that needs updating regularly and the systems can even be linked with internal company networks.

\* For a list of previous customers and clients, please see our website –
